

Treibball Beginner II:

- ___ Dog will go around the ball as directed to get to the target position
- ___ Dog can go to the opposite side of the ball and assume a stationary position (sit, stand or down) for 5 count without ball contact
- ___ Dog understands how to reposition himself opposite the handler (keeping the ball between the dog and handler) as the handler moves around the ball
- ___ Dog can start near the handler, 15' from the ball, and get to the stationary position behind the ball facing the handler (can use a target)
- ___ Dog can push one ball directly to the handler from 10' away. Handler may not step toward the dog across the goal line, but may move laterally 5' each direction from the start position (10' wide goal, handler starts in the center) Handler needs to be able to capture the ball without leaving the designated goal area.
- ___ Handler recognizes the signs that their dog is getting over stimulated, understands how to keep the dog calm and how to teach an "off switch" and self-control to the dog using indirect access exercises
